

Danné Montague King – Pro Alpha Six Layer Peel Treatment Client Information Form

The Pro Alpha Six-Layer Peel treatment uses a combination alpha hydroxy acids designed to remove the surface epidermal cells of the skin. This treatment has been designed to be extremely effective in reducing wrinkles, light scarring, and uneven skin tones with limited discomfort, contraindications, or convalescence. This treatment is safe for use on all skin types and will be adjusted in strength to your particular skin type and level of sensitivity. Results will vary from person to person since each individual's skin is different.

Procedure:

1. You should have at least one or two DMK Enzyme Treatments before having a Pro Alpha Six Layer peel treatment.
2. One week before your scheduled the Pro Alpha Six-Layer Peel Treatment. You will notice that while using the Retosin, your skin will begin to look leathery and darker this is normal.
3. On the day of your Pro Alpha Six-Layer Peel Treatment, your practitioner will begin applying six separate layers of the Pro Alpha Serum. You will experience some stinging and burning during these applications, these sensations will subside. If the irritation becomes too uncomfortable, let your practitioner know so that your serum can be adjusted for further application.
4. After the application is completed, you will leave the serum on your skin and will not wash for at least 12 hours. Your skin will look shiny and may be slightly red. If your skin continues to burn, rinse with a solution of baking soda and water.
5. In the event that you experience and blisters, sores or weeping of the skin, contact your practitioner and begin applying a topical anti-bacterial salve to prevent any possibility of infection.
6. Beginning the next day, you can start cleansing your skin as normal with your Danné cleanser followed by a small amount of Acu Crème or Contraderm as prescribed. You must apply sunblock if you are going to have any exposure to the sun. Should you choose, you can also start using make-up as desired.
7. By the third day, you should begin to notice your skin beginning to peel. This will vary depending on your skin type from minor flaking to large peeling sections. Regardless of how severe the peeling is, you must not pull, pick, or scratch at the dead skin. It is very important that you allow this skin to come off naturally.
8. By the seventh day, most of this dead skin will have exfoliated (detached) itself from the healthy new cells below. On this day, you will be scheduled for an Enzyme Lift-Off Treatment. This treatment helps remove any remaining dead cells that have not completely exfoliated.

9. You must now use your regular DMK Home Prescriptives and continue with your professional maintenance treatments in order to maintain your results.

Note: This treatment will give definite improvement and restoration to the appearance of your skin. However, each individual's result will vary depending on their skin condition and skin type. While many will be satisfied with just one treatment, others may require several treatments over a period of time to achieve their desired results.

Although this treatment is safe for all skin types with minimum contraindications, it is possible that you may experience some of the following temporary contraindications as a result of this treatment.

- Stinging and burning sensation to the skin
- Redness and irritation of the skin
- Swelling or tightness of the skin
- Blistering, weeping or scabbing of the skin. If this occurs, notify your practitioner and begin using an antibacterial salve to avoid possible infection.
- Outbreak of pimples if impurities have been locked under the skin
- Excessive peeling of the skin
- Darkened colour of the skin until it exfoliates
- Increased photosensitivity of the skin, avoid problems by using sunblock

Although these contraindications may be uncomfortable, they will not result in any permanent damage as long as you inform your practitioner of any problems and follow instructions you are given. As with any treatment, there is always a very small possibility that you could have a negative reaction that you practitioner could not predict.

I have read the above and have asked any questions I might have regarding this treatment. I agree to notify my DMK practitioner should I have any contraindications as a result of this treatment. I agree to follow all instructions given by my Danné practitioner including what products to use before and after my treatment. I agree to hold my Danné practitioner without fault should I experience any discomfort or contraindication as a result of this treatment.
